

Sparklet™ Balloon Instructions

1-866-TK-today (858-6329)
www.tkinnovations.com

IMPORTANT: Immediately reseal Moist-Pak™ zip bag to keep remaining Sparklets™ Pop Resistant*.

STEP 1

Using a THIN stick, insert a latex balloon into the Sparklet.

Hint: Stick as thin as a plastic coffee stirrer is best. Roll the latex balloon tightly around the stick for ease of insertion.

STEP 2

Inflate outer Sparklet first for **ONLY** 5 seconds.

Hint: This allows some space for the latex balloon to easily inflate. All you need is a tiny air pocket. 5 seconds is plenty.

STEP 3

Inflate latex balloon to its recommended size. Do **NOT** tie latex balloon.

22" or 18" Sparklet insert 11" latex
Hint: Undersize latex if using outdoors.

STEP 4

Return to outer Sparklet and **COMPLETE** inflation until Sparklet is **100% WRINKLE FREE**. Use **LATEX BALLOON INFLATOR**.

Hint: MUST inflate 100% wrinkle-free until seam is smooth to achieve 3 - 5 week float.

STEP 5

Tie a ribbon **AROUND** balloon(s) **VERY VERY** tightly. **NEVER** tie actual balloon(s).

Hint: For best results, use Larks Head Knot shown below. If wrinkles develop within 24hrs, you have not tied tight enough. Retie.

see
below

SOLID COLORS: Inflate only latex balloon. Do not inflate outer Sparklet. Continue to Step 5.

22" Sparklet = Insert 18" latex balloon
18" Sparklet = Insert 16" latex balloon
10" Sparklet = Insert 9"/11" latex balloon
-latex balloon may pop in direct sunlight

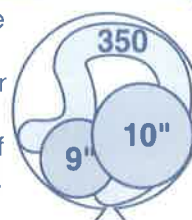

Arches & Garlands: Inflate two 18" Sparklets (with 16" latex balloon inserts) Tie the two LATEX balloons together to make a duplet. Twist two duplets together to make a quad and start building an arch or garland.
www.tkinnovations.com

SEVERAL BALLOONS INSIDE: Inflate latex balloon to desired size. Tie and cut off remaining neck (use ribbon cutter on inflation equipment if available).

Insert, inflate, tie, and cut off the neck of a 2nd latex balloon. Repeat as needed. Flex tilt works best. Continue to Step 4.

Hint: Round latex balloons will last longer than heart shaped, sculpting, or other shaped balloons. 350's last longer than 260's. Hint: Instead of using lots of little balloons to fill a 22" Sparklet, try using a few larger balloons to save time.

IMPORTANT: NEVER leave ANY wrinkles on seam. *Pop Resistant balloons can endure high inflation & outside pressures. *Do not expose balloon to extreme heat or sharp objects. Sparklets remain Pop Resistant* when bag is kept sealed and moist towelette wet. Re-moisten towelette if necessary.

Under Inflated
Do NOT inflate soft like a foil balloon! It will not float well.

Correctly Inflated
Stop inflating just as wrinkles disappear. Achieve 3-5 week float.

Over Inflated
Above example is twice the correct size. Not recommended!

Make a loop that opens and closes when tails are pulled.
Hint: Use strong ribbon. Do NOT tie balloon(s).

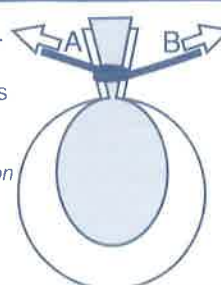

Pull tails A&B **VERY tightly** to cinch the necks of (both) balloon(s).

Turn upside down. Pull A&B tails in opposite directions **VERY tightly**.

Hint: Support balloon between your belly and the counter for ease.

Bring tails A&B around to opposite side from where cinched and tie 2 knots **VERY tightly**.
